

Request that you reject the NAB's petition 04-160. Routinely driving between Florida and Kentucky, weather and traffic conditions are critical and xm radio provides that needed information. In Florida I find that only xm radio provides me with clear, concise weather and traffic information. Regular radio a.m. reception is unintelligible, loudly static and at my age (78), I need informed and reliable weather and traffic reports. I simply do not understand why the National Association of Broadcasters would deny me the right to hear information which could be life saving along with the fine broadcasting to which I subscribe.

Thanks in advance to you for listening to my concerns.
